

# M7 Integrated Multibeam Sonar

M7 is a highly-versatile, high-resolution multibeam echo sounder, which is also extremely simple to use and to install on the vehicle. The tightly coupled GNSS INS makes it easy to integrate even on ultra-small vehicles and very quick to mobilize. Its hydrodynamic form factor and its low power consumption makes it the perfect choice for small autonomous surface vehicles, data acquisition included.

## Specifications:

<b>Swath coverage</b>	Up to 130 degrees
<b>Number of RX beams</b>	256
<b>TX beam width along-track</b>	1.45°
<b>RX beam width</b>	1° ±0.1
<b>Range</b>	>200m
<b>Beam distribution</b>	Equi-Distant and equi-angular beam distribution
<b>Roll stabilisation</b>	Yes
<b>Pressure rating</b>	60m
<b>GNSS/INS</b>	INS in Sonar
<b>Position</b>	HOR: ±(8mm +1ppm X Distance from RTK Station) VER: ±(15mm +1ppm X Distance from RTK Station) (Assumes 1m GNSS Separation)
<b>Heading Accuracy</b>	0.08° (RTK) with 2m Antenna Separation
<b>Pitch/Roll Accuracy</b>	0.03° Independent of Antenna Separation
<b>Heave Accuracy</b>	2cm or 2% (TRUEHEAVE™). 5cm or 5% (Real Time)
<b>Ping Rate</b>	50 Hz
<b>Outputs</b>	Bathymetry, Side Scan
<b>Compatible with</b>	Qinsy, Hypack, BeamworX, SonarWiz a.o
<b>Weight w. bracket</b>	Air: 3.5 kg Water: 1.2 kg

data acquisition included
